NAME: WRECK DNS VULNERABILITIES IN MULTIPLE TCP/IP STACK SOFTWARE

Boston Scientific is dedicated to ensuring the safety and security of our products worldwide. We have closely monitored the April 12, 2021 announcement regarding the vulnerabilities of several open source Transmission Control Protocol/Internet Protocol (TCP/IP) embedded stacks containing Domain Name Server (DNS) vulnerabilities. After thorough review we have determined this vulnerability does not affect any Boston Scientific products.

The following types of TCP/IP stacks are affected by the vulnerabilities:

- o FreeBSD (vulnerable version: 12.1)
- o IPnet (vulnerable version: VxWorks 6.6)
- o NetX (vulnerable version: 6.0.1)
- o Nucleus NET (vulnerable version: 4.3)
