ICD-10-CM (diagnosis) Coding Guide for Spinal Cord Stimulation

On October 1, 2015 CMS will implement the ICD-10-Clinical Modification (ICD-10-CM) code set and the ICD-10-Procedure Classification System (ICD-10-PCS), which will replace the ICD-9 code sets for diagnosis and inpatient facility procedure coding. The information below represents the 2015 ICD-10-CM code set which were translated from ICD-9-CM. Outpatient procedure codes (CPT codes) are not impacted by the ICD-10-PCS conversion.

ICD-9-CM (Diagnosis)

- Approximately 14,500 codes
- 3, 4 or 5 digits
- Numeric codes
 - With the exception of E and V codes which are alpha-numeric
- Lacks room for expansion

ICD-10-CM (Diagnosis)

- Approximately 70,000 codes
- 3-7 digits
- Alpha-numeric codes
- Expandable design for new diagnoses
- Systems will need to maintain both code sets to crosswalk for disease tracking, medical necessity edits, and outcomes studies

Commonly used Diagnosis Codes for SCS: ICD-9-CM to ICD-10-CM Crosswalk

The codes listed below are for informational purposes only, and are not intended to act as a comprehensive list of all SCS related diagnosis codes. The ICD-10 mappings may not include all possible ICD-10-CM mappings. Codes are listed by ICD-9 code. Physicians are responsible for appropriately documenting and selecting accurate codes. We recommend that you consult with your payers with reimbursement or coverage questions.
