The PeriVac Kit is intended for use in pericardial aspiration and drainage in the presence of pericardial effusion or tamponade.

PeriVac with 8.3F / Straight Catheter plus Clip

Description

Pericardiocentesis should be performed only by physicians thoroughly trained in invasive cardiology and in the techniques of pericardiocentesis and in the specific approach to be used, if no drainage is seen accumulating over several hours, the lumen of this catheter may be obstructed by cellular debris. Gentle flushing of the catheter with sterile saline may be requested.
