†Assessed by repeated bidirectional curving up to 100 cycles while tracing the curve radius at each step (p<0.001) and by full bidirectional articulation to maximal extension up to 10 times to achieve mechanical fatigue (p=0.007). Comparisons done using 5 SureFlex™ and 3 competitor sheaths, with needle and dilator inside sheath. Based on bench testing conducted using SureFlex™ Steerable Guiding Sheath, which has identical steering mechanisms to VersaCross™ Steerable Sheath. Bench testing or pre-clinical study results may not necessarily be indicative of clinical performance. The testing was performed by or on behalf of Boston Scientific. Data on file.
