0.018"* Interlock Detachable Coil System Family

Precise Coil Placement: Leveraging Direxion™ Torqueable Microcatheter with 2 RO Markers for Use with Interlock-18 and IDC Detachable Coils

The Direxion microcatheter is available with two visible radiopaque markers 30 mm distance apart, for visualization aid when the catheter tip is buried into a coil nest.

Interlock and IDC detachable coils have a radiopaque marker band on the delivery wire 30 mm proximal to the interlocking arms.

As the coil is advanced, watch as the proximal coil marker approaches the proximal microcatheter marker. Proximal to this point, the coil can still be retracted and repositioned.

When the proximal coil marker passes the proximal microcatheter marker, the coil has been deployed into the vessel.

For simple and accurate coil placement

* 0.018" = 0.46 mm
