

AMS Conceal™

Low Profile Reservoir

**One size. Low profile.
Increased flexibility.**

The AMS Conceal Reservoir

The low profile choice is the highly flexible solution.

The AMS Conceal Reservoir has a low profile reservoir shape designed to optimize fit in the space of Retzius, offering a sleek and flexible solution for you and your patients.

- ▶ Compatible with all AMS 700™ Inflatable Penile Prosthesis cylinder (CX/LGX/CXR) configurations
- ▶ One size can be filled with 65-100 ml for increased flexibility
- ▶ Parylene coating technology to mitigate device fatigue and increase durability¹
- ▶ Available with or without InhibiZone™ Antibiotic Surface Treatment

The AMS 700 Prosthesis with InhibiZone Treatment is the only inflatable penile prosthesis with clinical evidence showing a significant reduction in the rate of revisions due to infection in both original and revision implants.²

Reservoir options

InhibiZone Treatment

InhibiZone Treatment is a proprietary combination of rifampin and minocycline and a manufacturing process that impregnates the antibiotics into the prosthetic surfaces that contact tissue.

Part Numbers	
720185-01	InhibiZone Conceal
720182-01	Non-InhibiZone Conceal

InhibiZone Treatment provides largest zone of inhibition

One study demonstrated a significantly larger zone of inhibition against MRSA than Titan™, both in vitro and in vivo, up to 14 days after implantation.³

Zones of inhibition against *Staphylococcus aureus* produced by cylinder device segments explanted from rabbits. M/R = minocycline and rifampin; Van = vancomycin.

Prior to use, please review the Instructions for Use for a complete listing of indications, contraindications, warnings, precautions and potential adverse events.

Caution: Federal (U.S.) law restricts this device to sale by or on the order of a physician.

Caution: The law restricts this device to sale by or on the order of a physician.

Indications: The AMS 700™ Series Inflatable Penile Prosthesis is intended for use in the treatment of chronic, organic, male erectile dysfunction (impotence).

Contraindications: Patients who have active urogenital infections or active skin infections in the region of surgery or for the AMS 700 prosthesis with InhibiZone™ Antibiotic Surface Treatment have a known sensitivity or allergy to rifampin, minocycline, or other tetracyclines.

Warnings: Implantation will make latent natural or spontaneous erections, as well as other interventional treatment options, impossible. Men with diabetes, spinal cord injuries or open sores may have an increased risk of infection. Implantation may result in penile shortening, curvature, or scarring.

Potential Adverse Events: Urogenital pain (usually associated with healing), urogenital edema, urogenital ecchymosis, urogenital erythema, reservoir encapsulation, patient dissatisfaction, auto-inflation, mechanical malfunction, impaired urination, and infection. Rx Only

Product available in the European Economic Area (EEA). Please check availability with your local sales representative or customer service.
