

# CONTAK RENEWAL<sup>®</sup> 3 RF

Models H210, H215, H217, H219

## Details About Your Boston Scientific CONTAK RENEWAL<sup>®</sup> 3 RF Cardiac Resynchronization Therapy Defibrillator (CRT-D)

### What is a CRT-D?

CRT-D stands for *cardiac resynchronization therapy defibrillator*. A CRT-D is a small, battery-powered device that holds a tiny computer. It is implanted in the body to provide special pacing therapy to treat heart failure. It can also detect and treat both fast and slow heart rhythms. Your doctor programs your CRT-D to respond appropriately based on your individual heart rhythm needs.

### Treating dyssynchrony

In heart failure, the chambers of the heart do not contract quite as they should. They are *dyssynchronous*, or *out of rhythm*. When that happens, your heart cannot provide your body with the blood flow it needs to function properly. Cardiac resynchronization therapy (CRT) is designed to help your heart pump better. It delivers specially timed electrical impulses to coordinate, or *resynchronize*, the timing of your heart's contractions. This can help restore your heart's pumping function or ability to fill with blood and work more efficiently.

### Treating fast heart rhythms

If a dangerously fast ventricular heart rhythm occurs, your CONTAK RENEWAL 3 RF CRT-D can deliver lifesaving therapy. Depending on your condition, the CRT-D may deliver small but rapid electrical signals called *antitachycardia pacing* (ATP). Or it may deliver a full-energy shock. These therapies are designed to return your heart rhythm to normal.

### Treating slow heart rhythms

If an abnormally slow heart rhythm occurs, your CONTAK RENEWAL 3 RF CRT-D can act like a pacemaker to deliver small electrical signals that help your heart beat more normally. Your CRT-D can also help increase your heart rate to meet your body's needs when you are active.

### How small is my CRT-D?

Model	Height	Width	Thickness	Weight
<b>H210,</b> <b>H215</b>	3.06 in. 7.78 cm	2.46 in. 6.24 cm	0.55 in. 1.40 cm	2.89 oz. 82 g
<b>H217,</b> <b>H219</b>	3.25 in. 8.26 cm	2.60 in. 6.60 cm	0.55 in. 1.40 cm	3.17 oz. 90 g

### How long will my CRT-D last?

Like anything that operates on a battery, the life of your CRT-D will depend on how much the battery is used. The battery is used every time your device delivers therapy. So the amount of therapy you receive, and the amount of energy your doctor programs into those therapies, affects the life of the battery. A CONTAK RENEWAL 3 RF CRT-D typically lasts 4–6 years.

## What happens after my implant procedure?

### Care and recovery at home

Your doctor or nurse will give you specific instructions to follow when returning home. Full recovery from surgery can take from several days to a few months, depending on your condition. It is important that you are actively involved in your own recovery. Follow your doctor's instructions about caring for the implant site and letting your other doctors, dentists, and emergency personnel know that you have an implanted CRT-D system.

### Follow-up visits

Once you have a CRT-D, it is important to follow your doctor's guidelines for follow-up visits. These typically occur every 3 months. Your doctor uses the follow-up visits to check your device and monitor your heart condition, which can change over time. Your doctor may also adjust your device settings.

If you are enrolled in the LATITUDE® Patient Management System, your doctor can check your CONTAK RENEWAL 3 RF CRT-D remotely between visits.

### Important Safety Information

#### Cardiac Resynchronization Therapy Defibrillators from Boston Scientific CRM

Cardiac resynchronization therapy defibrillators (CRT-Ds) are used to treat heart failure patients who have symptoms despite the best available drug therapy. These patients also have an electrical condition in which the lower chambers of the heart contract in an uncoordinated way and a mechanical condition in which the heart pumps less blood than normal. CRT-Ds are not for everyone, including people with certain steroid allergies. Procedure risks include infection, tissue damage, and kidney failure. In some cases, the device may be unable to respond to irregular heartbeats or may deliver inappropriate shocks. In rare cases severe complications or device failures can occur. Electrical or magnetic fields can affect the device. Only your doctor knows what is right for you. Find further important safety information at [www.lifebeatonline.com](http://www.lifebeatonline.com). These devices are available by prescription only. Individual results may vary.
