

Up to **1 in 5** women

need relief from
heavy bleeding.

HTA[®] System
could be the
answer.

HTA[®] System

q u e s t i o n n a i r e

If you answer yes to any one of the following questions, you may be suffering from heavy menstrual bleeding:

- Does your period last longer than seven days? Yes No
- Do you use more than 3 pads or tampons per day? Yes No
- Do you pass clots during your periods? Yes No
- Does your heavy bleeding affect your work, social, athletic or sexual activities? Yes No
- Has medication (birth control pills) failed to help your heavy bleeding? Yes No

After you have completed this patient questionnaire, please present this to your physician and ask him/her to discuss your treatment options including whether the HTA System procedure is right for you.

INDICATIONS: The Hydro ThermAblator[®] (HTA) System is a hysteroscopic thermal ablation device intended to ablate the endometrial lining of the uterus in premenopausal women with menorrhagia (excessive uterine bleeding) due to benign causes for whom childbearing is complete. **CONTRAINDICATIONS:** The HTA System is contraindicated for use in a patient: who is pregnant or wants to be pregnant in the future, as pregnancy after ablation can be dangerous to both mother and fetus; who has known or suspected endometrial carcinoma or premalignant change of the endometrium, such as adenomatous hyperplasia; who has active pelvic inflammatory disease or pyosalpinx; hydrosalpinx; who has any anatomical or pathologic condition in which weakness of the myometrium could exist, such as, prior classic cesarean section or transmural myomectomy; who has an intrauterine device in place; or who has active genital or urinary tract infection, e.g., cervicitis, endometritis, vaginitis, cystitis, etc., at the time of treatment. **POTENTIAL ADVERSE EFFECTS** that may occur include: thermal injury to adjacent tissue including cervix, vagina, vulva, and/or perineum; heated saline escaping from the device system into the vascular spaces; hemorrhage; perforation of uterus; complications with pregnancy (Note: pregnancy following ablation is dangerous to both the mother and the fetus); risks associated with hysteroscopy. **WARNINGS:** NOTE: Failure to follow any instructions or to heed any Warnings or Precautions could result in serious patient injury. **CAUTION: Federal Law restricts this device to sale by or on the order of a physician. The physician using the device must be trained in diagnostic hysteroscopy.**
