   b. Tap NEXT and go to step 5.
   c. Or, if you prefer, tap CHANGE LANGUAGE.
   d. Tap DONE to confirm preferred language.
      i. The screen in step 4A will display in the language you selected. Tap NEXT.

Step 5
Change Language
1. Tap START SETUP and follow the on-screen instructions.

Step 6
Complete Setup
1. Tap START SETUP and follow the on-screen instructions.

Step 7
All done!
1. Setup is complete! Please review the section: “Using myLUX” in this Quick Start Guide.
Your insertable cardiac monitor (ICM) automatically records and stores irregular heart rhythms — whether you’re near your mobile device or not.

Each night, your mobile device collects irregular heart rhythms stored in your ICM and automatically sends that data for your clinic to review.

Your clinic will contact you if there is a need for further review.

CAUTION: The ICM system is not meant to assist with health emergencies. If you need immediate medical attention, call your health care provider or seek emergency medical services.

Keep your mobile device powered on at all times.
You do not need to bring your mobile device with you during the day, unless instructed by your clinic.
Change your mobile device each night using the charging cord, and place within 6 feet (2 meters) from where you sleep.

When you see this icon, you know that everything is working fine — no action is needed.
You may have a "Record Symptoms" button. Use the button only when feeling symptoms that your clinic has asked you to record. This button is not available to every patient.

B. Home Button
C. Back Button
D. Charging Port

Using myLUX

- Keep your mobile device powered on at all times.
- You do not need to bring your mobile device with you during the day, unless instructed by your clinic.
- Change your mobile device each night using the charging cord, and place within 6 feet (2 meters) from where you sleep.

How it works
Your insertable cardiac monitor (ICM) automatically records and stores irregular heart rhythms — whether you’re near your mobile device or not.

Each night, your mobile device collects irregular heart rhythms stored in your ICM and automatically sends that data for your clinic to review.

Your clinic will contact you if there is a need for further review.

CAUTION: The ICM system is not meant to assist with health emergencies. If you need immediate medical attention, call your health care provider or seek emergency medical services.
