

Please carry your card at all times.

Your cardiologist has prescribed medications to thin the blood and prevent blood clots after your implant. It is extremely important to follow the medication plan as prescribed by your cardiologist. Before considering any surgery or dental work that would require you to stop taking these medications early, you and your doctors should consider the risks from stopping these medications too soon. **For questions about your coronary stent system or other procedures (e.g., MRI), please contact implanting cardiologist.**
