DON'T LET CORONARY ARTERY DISEASE (CAD) HOLD YOU BACK

New advances in a minimally invasive procedure may be able to help

Heart medication may help your symptoms, but it can't open blockages in your arteries. And for many people, heart bypass surgery isn't an option. Thankfully, there's a minimally invasive procedure called PCI—or percutaneous coronary intervention—that can open blockages in your arteries to restore blood flow. Even arteries with total blockages. Advances in PCI technology have made it an option for people who may have been told there were no other options—even those who have been turned down for bypass, or those who are still experiencing fatigue, shortness of breath, or chest tightness with medication.

If you want to get back to living the life you want, make an appointment today!

1 Talk to [insert physician name or specialty] at [insert hospital name] to find out if PCI might be right for you.
Street address
City, State ZIP
Phone number

2
3 Place Logo Here

- 1 Use your cursor to select the bracketed text, and type over it to replace with your physician name and hospital name. Remove the brackets from text. Replace placeholder copy with address and phone number.

- 2 Use the Content Editing > Add Image function to place your hospital's logo (.png, .jpg) in the placeholder area. (The "Place Logo Here" text will not print, only the placed logo)

- 3 Test print to confirm logo placement or clear the highlights from editable fields.
