

Introducing

LUX-Dx™ **ICM System**

IT'S TIME TO EXPECT MORE FROM YOUR ICM

Current ICM devices can overwhelm clinic staff with false positive data.
The time required to manage it could be spent on more important things.

In bench
testing, false
positives were
reduced by
53%^{1*}

NEW LUX-Dx INSERTABLE CARDIAC MONITOR

- Capable of rejecting false positives with a unique dual-stage algorithm that detects, then verifies data before sending the results
- Remote programming that allows for flexible device programming changes without requiring the patient to be present in the clinic
- New LATITUDE Clarity™ Data Management System -- streamlined data delivery that sends you only the data you need
- Mobile technologies designed to enhance patient compliance and improve workflow

*Bench testing showed a relative reduction of 53.1% in false positives when QRS morphology was turned on.
Data used for this research was provided by Telemetric and Holter ECG Warehouse (THEW), University of Rochester, NY.
