

Frequently asked questions

What is Endura Weight Loss Solutions?

Endura Weight Loss Solutions is a suite of clinically proven, endoscopic procedures to address the weight loss needs of people living with obesity. With our devices and patient education resources and support, physicians can offer their patients effective, minimally invasive options beyond traditional surgery or prescription medication.

What procedures are included in the Endura Weight Loss Solutions suite?

Endura Weight Loss Solutions includes a range of advanced endoscopic procedures, including Endoscopic Sleeve Gastroplasty (ESG), Transoral Outlet Reduction (TORe), and IntraGastric Balloons (IGBs).

Why was it created, and what problem does it solve for physicians?

Endura Weight Loss Solutions offers weight loss done differently. It is a gap therapy between medication and surgery, giving physicians and their patients minimally invasive weight loss options.

How is it different from other weight loss solutions on the market?

Endura Weight Loss Solutions includes a range of clinically backed procedures designed to support sustainable weight loss when combined with diet and lifestyle modifications. It's a proven and effective alternative that patients want.

**A new era
in weight loss**

How can it help my patients?

Boston Scientific understands your patients' desire to break out of the lifelong cycle and achieve life-changing results. Endura Weight Loss Solutions was designed to provide patients with meaningful, effective change through a range of procedural options when combined with diet and lifestyle modifications.

Who is the ideal candidate for Endura Weight Loss Solutions?

The ideal candidate is someone who has tried existing methods of weight loss without their desired results. It may refer to someone whose weight has a major impact on their life and who is looking for an effective option without the downtime associated with surgery.

What devices are required to perform these procedures?

Endoscopic Sleeve Gastroplasty (ESG) and Transoral Outlet Reduction (TORe) procedures require the OverStitch™ Endoscopic Suturing System or the OverStitch NXT™ Endoscopic Suturing System. Boston Scientific offers the Orbera 365™ Intragastric Balloon System and the BIB™ Intragastric Balloon System for intragastric balloon procedures.

What type of education or training is available for me to learn Endura Weight Loss Solutions procedures?

Boston Scientific is here to support. We offer both in-person and online training, as well as interactive procedures and skills training depending on where you are in your learning journey.

Is Endura Weight Loss Solutions efficacy supported by clinical data?

Yes, Boston Scientific has collected a body of evidence that supports the safety, effectiveness, and durability of ESG. As well as over 150 clinical abstracts published on the TORe procedure and over 20 years of clinical history supporting the intragastric balloon procedures.

How should I explain Endura Weight Loss Solutions when speaking to a potential patient?

Endura Weight Loss Solutions includes a range of minimally invasive procedures done through the mouth. They work to break the cycle that makes weight loss feel out of reach, helping people with obesity move closer to their goals when combined with diet and lifestyle modifications.
