

Take Control

The Resolution 360 Clip builds on the strong clinical and economic track record established by Resolution Clip while offering new benefits to providers and patients including controlled rotation in tortuous anatomy designed for more accurate clip placement and shorter, more efficient procedures.

The Resolution 360 Clip has received CE mark and is indicated for:

1. Hemostasis for:
 - Mucosal/sub-mucosal defects < 3 cm,
 - Bleeding ulcers, Arteries < 2 mm, Polyps < 1.5 cm in diameter, Diverticula in the colon,
 - Prophylactic clipping to reduce the risk of delayed bleeding post lesion resection.
2. As a supplementary method, closure of GI tract luminal perforations < 20 mm that can be treated conservatively.
3. Endoscopic marking.
4. Anchoring to affix jejunal feeding tubes to the wall of the small bowel.

Resolution 360™ Clip

Economic and Clinical Value

Features	Potential Benefits
Rotation in either direction	<ul style="list-style-type: none"> • 1 to 1 rotation designed for more accurate clip placement, and shorter, more efficient procedures.
Choice of two rotation mechanisms	<ul style="list-style-type: none"> • Innovative braided design enables the physician or nurse/technician to provide controlled clip placement for potential procedural efficiency and accuracy. • Ability to maintain hand in handle while rotating to preserve clip positioning for deployment.
Device Built on Resolution Platform	<ul style="list-style-type: none"> • Resolution Clip has a reliable clinical history with 11 years of proven success, 6 million clips sold and over 220 clinical articles.
More Clinical Indications, including Prophylactic Indication	<ul style="list-style-type: none"> • More indications than its main competitors*, presenting opportunities to realize efficiencies in inventory carrying cost, lab storage space, and labor associated with managing more product.
Tactile Feedback	<ul style="list-style-type: none"> • Tactile feedback may allow the user to confirm hemostasis before deploying the clips, reducing the likelihood of using a second clip. • Upon deployment, Resolution Clips are designed to lock securely in place for improved retention, which may lead to fewer hospital readmissions and repeat procedures. In a randomized, prospective study on hemoclippping of chronic canine ulcers, "the Resolution Clip was retained significantly longer" than other hemoclips in the study with no delay of ulcer healing. (The results of this canine study may not be representative of performance in humans.)**
Easy Setup/Use	<ul style="list-style-type: none"> • Elimination of plastic sheath allows for fewer setup steps.
