

Jagwire™ Revolution

High Performance Guidewire

GET WIRED FOR SUCCESS

To advance and manage pancreaticobiliary diseases efficiently and effectively you need a suite of access and cannulation solutions, supported by clinical evidence and designed to deliver the best patient care possible.

Successful cannulation is a critical first step for all ERCP procedures and having the right guidewire can make a real difference, from the most simple to the most complex cases.

Introducing the Jagwire Revolution High Performance Guidewire...

Similar Stiffness and Pushability of our .035" in a .025" Guidewire

The Jagwire Revolution High Performance Guidewire is a versatile .025" guidewire engineered to have the stiffness and pushability that you would expect in our Jagwire .035" guidewire combined with both access and exchange characteristics to help improve completion rates of initial ERCPs.

Efficient Access and Navigation

- Tight alpha-loop formation designed for knuckling through challenging ducts and strictures
- Atraumatic 5 cm hydrophilic tapered tip
- Super elastic Nitinol core designed to enhance performance in tortuous anatomy

Navigation in Tortuous Anatomy

- Hydrophilic coating designed to aid passability through devices and difficult strictures
- Straight and angled tips for physician preference and difficult strictures
- Engineered to facilitate precise torque ability of the angled tip

Improved Visualization Design

- Tungsten filled tip for improved fluoroscopic visualization
- Striped guidewire movement markers

Control and Durability

- RX Biliary System compatible design helps enable clinician to maintain control of the guidewire throughout the procedure and engage the locking mechanism
- Innovative and durable coating design

*Data on File PDM E0445

Indications for Use

The Jagwire Revolution High Performance Guidewire is indicated for use throughout the alimentary tract as well as for selective cannulation of the pancreatobiliary system including the common bile duct, pancreatic duct, cystic duct, and right and left hepatic ducts. The endoscopic guidewire is designed to be used during endoscopic pancreatobiliary as well as gastrointestinal procedures for introduction and exchange of catheters, cannulas, and sphincterotomes, and to aid in the placement of diagnostic and therapeutic devices.
