Front-Cutting
Rotablator’s diamond-tipped burr is engineered to immediately engage the lesion, enabling precise control of ablation even in tight or occluded lesions.

Stable Rotation
Rotablator’s diamond-tipped burr spins concentrically on the wire, providing confidence even when treating small or tortuous vessels.

Total Control
Control the outcome with a symmetric burr that creates a smooth lumen at a specific diameter.
Control ablation with a burr that follows the wire.
Control embolic release with a 5-micron diamond-tipped burr that ablates plaque into micro-particles smaller in size than a red blood cell.
