LONG STORY, (NOT) SHORT.

AMS 700™ LGX Penile Prosthesis

The only penile implant with cylinders designed to expand in length and girth

- Prostate cancer and penile straightening procedures may result in loss of penile length\(^1\,^2\)
- Penile shortening — real or perceived — may be devastating to a man’s self-confidence and may cause significant anxiety
- Although penile shortening may occur, the LGX cylinders were designed to expand in length and girth which could provide a patient with the opportunity to regain or maintain penile length\(^3\,^4\)
