GreenLight XPS™ Xcelerated Performance System

Safe, effective and efficient
GreenLight XPS™ Laser Therapy System

#1 Choice of urologists worldwide for laser benign prostatic hyperplasia (BPH) therapy with over 900,000 patients treated.¹

GreenLight™ Laser Therapy combines an optimal 532 nm wavelength with advanced laser technology for the safe, effective and efficient treatment of BPH²-⁵ and it’s appropriate for all patient types, regardless of other comorbidities.

**Powerful**
180 watts of maximum power output allows for efficient lasing.

**Smart**
FiberLife™ automatic safety system feature helps to detect conditions such as excessive heat before they cause fiber damage.

**Responsive**
TruCoag™ hemostatic control feature uses pulsating light to cauterize ruptured vessels, reducing bleeding fast and in multiple situations.⁶

**Efficient**
MoXy™ Liquid Cooled Fiber with Active Cooling Cap™ technology allows for saline flow over and around the fiber to help minimize power loss from fiber tip degradation.⁷

MoXy™ Liquid Cooled Fiber
Active Cooling Cap™ technology
Clinical and patient outcomes

GreenLight™ Laser Therapy is setting the new standard with equivalent clinical outcomes to transurethral resection of the prostate (TURP) with fewer serious adverse events, shorter recovery, and lower overall hospital costs.²,⁸,⁹ It is proven safe and effective for patients on anticoagulation therapy and treatment of large prostates.¹⁰

Equivalent clinical outcomes to TURP

<td>ρ=0.079</td>
</tr>
<tr>
<td></td>
<td>ρ=0.337</td>
<td>ρ=0.195</td>
</tr>
</tbody>
</table>

Fewer serious adverse events

Complications: 48 hours - 30 days⁸

Significantly fewer protocol defined complications between 48 hours and 30 days for GreenLight Laser Therapy compared with TURP, (p<0.001).

Shorter recovery

Less catheterization time⁹

<table>
<thead>
<tr>
<th></th>
<th>GreenLight</th>
<th>TURP</th>
<th>p&lt;0.001</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours</td>
<td>22</td>

<tr>
<th></th>
<th>GreenLight</th>
<th>GreenLight</th>
</tr>
</thead>
<tbody>
<tr>
<td>% of cases as outpatient surgery</td>
<td>95</td>
<td>70</td>
</tr>
</tbody>
</table>

Studies demonstrate that 95% and 70% of GreenLight Laser Therapy cases were performed as outpatient surgery.

Lower overall hospital costs

Lower overall costs in US study⁸

<table>
<thead>
<tr>
<th></th>
<th>GreenLight</th>
<th>TURP</th>
</tr>
</thead>
<tbody>
<tr>
<td>$</td>
<td>$4,266</td>
<td>$5,097</td>
</tr>
</tbody>
</table>

Overall costs of GreenLight Laser Therapy were $4,266 ± $1,182 compared with $5,097 ± $5,003 for TURP, p=0.01.
It’s all about the wavelength

Wavelength is a primary factor influencing procedural efficiency and clinical outcomes.

Laser physics and procedural efficiency

Compared to other lasers for urologic applications, GreenLight Laser Therapy 532 nm wavelength is highly selectively absorbed in tissue hemoglobin and it is not impeded by the procedural irrigant. These unique properties allow the GreenLight laser to efficiently and rapidly vaporize prostatic tissue.13

GreenLight 532nm wavelength is absorbed by oxyhemoglobin.

Laser optical depth of penetration and coagulation zone

Depth of penetration is dependent on laser physics. Too deep could lead to unwanted post-operative symptoms, and too shallow could lead to slower, less efficient vaporization.

Deep coagulation may lead to increased dysuria and irritative symptoms.
Procedural efficiency

Lasing time

The GreenLight XPS laser system and MoXy Liquid Cooled Fiber provide efficient vaporization.

- 58 gram prostate: 35 minutes, 300,007 joules
- 87 gram prostate: 47 minutes, 437,436 joules
- 177 gram prostate: 61 minutes, 548,173 joules

Solutions beyond the device

Educating patients about GreenLight™ Laser Therapy

Our Healthcare Professional Resource Center offers a variety of hospital and practice marketing templates – from digital to print campaigns – to help physicians, practices and hospitals get the word out about treating BPH with GreenLight Laser Therapy.

View and download templates at professional.americanmedicalsystems.com

Building your GreenLight Laser experience

EDUCARE is a comprehensive suite of education and training programs offered by Boston Scientific that support healthcare professionals in the delivery of patient care worldwide. For professionals treating BPH, we offer comprehensive training pathways designed to help urologists build their GreenLight Laser Therapy experience.

The range of curriculum combine online modules with didactic coursework, simulation, live observation and proctorship opportunities to create a robust training experience for GreenLight Laser Therapy users.

For more information contact your local sales representative.

The GreenLight™ laser system is intended for incision/excision, vaporization, ablation, hemostasis and coagulation of soft tissue, including photoselective vaporization of the prostate for benign prostatic hyperplasia (BPH). The laser system is contraindicated for surgery, contraindicated where appropriate anesthesia is contraindicated by patient history, have calcified tissue, require hemostasis in >2mm vessels, have uncontrolled bleeding disorders, have surgery, contraindicated where appropriate anesthesia is contraindicated by patient history, have acute urinary tract infection (UTI) or severe urethral stricture. Possible risks and complications include, but are not limited to, irritative symptoms (dysuria, urgency, frequency), retrograde ejaculation, urinary incontinence, erectile dysfunction, hematuria - gross, UTI, bladder neck contracture/outlet obstruct, urinary retention, perforation - prostate, urethral stricture.

Prior to using these devices, please review the Operator’s Manual and any accompanying instructions for use for a complete listing of indications, contraindications, warnings, precautions and potential adverse events.
