

GreenLight™ Laser Therapy

Lasting relief for benign
prostatic hyperplasia

If you're living with **benign prostatic hyperplasia (BPH)**, also known as enlarged prostate, you know it can have an impact on your life – day and night.

With GreenLight Laser Therapy, it doesn't have to be that way.

Live your life on your terms, away from:¹

- Weak stream
- The urgent need to go
- Uncomfortable, painful, or burning urination (dysuria)
- Nighttime waking to urinate (nocturia)

of patients say they would recommend GreenLight Laser Therapy to someone else with BPH²

A proven treatment

GreenLight Laser Therapy has been proven for more than:

20
years³

1 million
patients*³

GreenLight provides rapid,⁴ lasting relief⁵ – with symptom reduction for up to 15 years.⁶

This procedure can be performed in a hospital or ambulatory surgery center, with same-day or next-day discharge.⁵

Why choose GreenLight Laser Therapy?

Having an enlarged prostate can make for bothersome urinary symptoms.¹ GreenLight Laser Therapy uses a laser to remove overgrown tissue in order to improve urine flow.

"This GreenLight Laser procedure is fantastic. It's something I would highly recommend to anybody who needs this kind of therapy."

– Jon, GreenLight Laser Therapy patient

Individual results vary.

Before

After

The American Urological Association recommends GreenLight Laser Therapy for patients who have an enlarged prostate (including small, medium, and large prostates), have trouble with urinary retention, and/or are taking blood thinners.⁷

One procedure, lasting results

Intended benefits for people suffering from BPH include:

- ▶ Lasting symptom relief for up to 15 years⁶
- ▶ Return to stable health and hospital discharge in 26 hours on average^{**8}
- ▶ Stopping or reducing BPH meds⁵
- ▶ Low risk of serious adverse events⁵
- ▶ Minimum impact on erectile function^{9,10}
- ▶ Ability to treat people with urinary retention and/or higher risk of bleeding¹¹

Compared with TURP, a traditional surgical option for BPH, GreenLight Laser Therapy is clinically shown to provide:²

- 50% less time, on average, with a catheter (22 hours vs. 46.7 hours)⁸
- 2x as fast return to stable health (26 hours vs. 52.8 hours)⁸
- Lower incidence of complications, such as bleeding¹²

**Stable health status: the time from entering recovery room until the earlier of discharge from the medical facility or the first successful voiding trial without an ongoing treatment-related adverse event.

All surgical treatments have inherent and associated risks. The GreenLight™ Laser System is intended for removal of soft tissue, including vaporization of the prostate for benign prostatic hyperplasia (BPH). Potential risks include irritative symptoms, bleeding, retrograde ejaculation and urinary tract infection. You should talk with your doctor about benefits and risks before moving forward with any treatment option. URO-545403-AA
