Benign prostatic hyperplasia (BPH) prevents millions of men from living life to the fullest. Unfortunately, drug therapy doesn’t always work or can have side effects, and transurethral resection of the prostate (TURP) can’t be used to treat all BPH patients.

GreenLight™ Laser Therapy was designed to be a safe, effective, easy-to-learn BPH treatment. It is grounded in advanced science and proven in a head-to-head trial. When compared to TURP, it has fewer serious adverse events, shorter recovery and lower overall hospital costs.1-8

The GreenLight™ Laser System is intended for incision/excision, vaporization, ablation, hemostasis and coagulation of soft tissue, including photoselective vaporization of the prostate for benign prostatic hyperplasia (BPH). The laser system is contraindicated for patients who: are contraindicated for surgery, contraindicated where appropriate anesthesia is contraindicated, patient history, have calculus tissue, require hemostasis in 12 mm vessels, have uncontrolled bleeding disorders, have prostate cancer or have acute urinary tract infection (UTI) or severe urethral stricture. Possible risks and complications include, but are not limited to: irritative symptoms (dysuria, urgency, frequency), acute urinary retention, urinary incontinence, rectal dysuria, hematuria - gross, UTI, bladder neck contracture/outlet obstruct, urinary retention, perforation of prostate, urethral stricture.

CAUTION: U.S. Federal law restricts this device to sale by or on the order of a physician. Indications, contraindications, warnings and instructions for use can be found in the product label supplied with each device. Information for use only in countries with applicable legal authority regulations. Material not intended for use in France.

*Serious adverse events defined as Clavien Dindo grade 3 and higher.

**CAUTION: The law restricts these devices to sale by or on the order of a physician.

**The vast majority of men treated with GreenLight Laser Therapy were complication-free after 6 months.
