LATEX FREE INFORMATION

In response to your request regarding latex in AMS products, please be advised that NONE of AMS' implantable products, mesh products, TherMatrix™ Office Thermo Therapy products or GreenLight™ Laser Therapy products contain latex in the product or in the packaging.

All of our products are LATEX FREE except for the following non-implantable product:

- Non-implantable Product: UroLume™ Urethral Measuring Catheter- Part # 72401446
Balloon section is latex.

Latex gloves are not currently used during the manufacturing and handling process. However, prior to July 2008, the people who assembled some of our products may have worn latex gloves, similar to the ones that surgeons wear, during the manufacturing process.

According to the FDA regulations effective in 1993, and consistent with subsequent European Union recommendation, any products containing latex are required to be labeled as such. AMS complies with all such regulations; therefore, the product labeling for the above Measuring Catheter includes a latex declaration.

AMS appreciates your interest in our products.
