**Imager™ II Catheters**

Refer to the device directions for use for complete instructions on device use.

**Intended Use/Indications for Use**

The Imager II Urology Torque Catheter is indicated for use in facilitating access to the urinary tract, either through a retrograde or antegrade route, and may be used in conjunction with a guidewire or for the infusion of radiopaque contrast material. The Imager II Urology Torque Catheter is also indicated for the infusion of gels, such as BackStop™ Gel, intended for use in the urinary tract.

**Contraindications**

This device is, in general, contraindicated for use in patients who are unsuitable for ureteral catheterization or the infusion of contrast material or gels, such as BackStop Gel.

**Warnings**

- For single use only. Do not reuse, reprocess or resterilize.

Warnings can be found in the product labeling supplied with each device.

**Potential Complications**

The complications which may result from ureteral catheter placement include, but are not limited to:

- Extravasation
- Hemorrhage
- Sepsis
- Edema
- Loss of Renal Function
- Perforation of kidney, renal pelvis, ureter and bladder
- Peritonitis
- Urinary tract infection

**Precautions**

Precautions can be found in the product labeling supplied with each device.

Caution: Federal (USA) law restricts this device to sale by or on the order of a physician.
