

The AMS Ambicor™, Tactra™ and AMS 700™ Penile Implants for treatment of erectile dysfunction

Please contact your physician with any questions about these procedures.

Frequently Asked Questions (FAQ) about your procedure

Is this an outpatient procedure?

Usually it is; however, this is a decision that will be made between you and your urologist.

How long does it take to perform a penile implant procedure?

Implantation of a penile prosthesis involves a surgical procedure typically lasting anywhere from 30 minutes to 2 hours.

Will anyone be able to visually tell I have an implant?

Once in place, your implant will be completely undetectable. It's fully concealed in the body. No one will know unless you tell them — even in the locker room.¹

How much pain will I experience?

You may experience pain or discomfort at the operative site(s) during the early time after surgery and when you first use your prosthesis. In most cases, the pain goes away within a few weeks of surgery; however, some cases of chronic pain have been reported.

How long after the surgery must I wait before I use the implant?

Your doctor will discuss when you will be able to use your device. With a penile prosthesis, most doctors will recommend that you wait four to six weeks before having intercourse.

How do I use the Ambicor or AMS 700 inflatable penile implants?

To inflate a Boston Scientific implant, you squeeze the pump in your scrotum, which will send fluid into the cylinders in the penis. This requires some manual dexterity. If you experience pain, contact your doctor.¹

Common questions to ask your physician

What do I need to do before my procedure?

What are the risks of the surgery?

How satisfied are patients with the results of this procedure?

What are some possible side effects?

Will I be able to drive myself home after the procedure?

What do I need to do for proper healing?

Additional resources

Living with a device

You can speak to a real patient with a Boston Scientific penile implant to ask candid questions about their experience. Call **+1 (844) 433-2873** or email **MHPatientEducation@bsci.com**, and a patient educator will connect you.

Identification cards

Identification cards include information about your device and how to use it. They're provided in the information packet that you'll receive from your doctor after the procedure. To request a new or replacement identification card for your Boston Scientific device, visit **BostonScientific.com/ID-Card** or call our team at **+1 (844) 433-2873**.

AMS 700™ Inflatable Penile Implant

Caution: U.S. Federal law restricts this device to sale by or on the order of a physician.

Your doctor is your best source for information on the risks and benefits of the AMS 700™ Inflatable Penile Prosthesis. Talk to your doctor for a complete listing of risks, warnings and important safety information. The AMS 700™ with Inflatable Penile Prosthesis is intended for use in the treatment of male erectile dysfunction (impotence). Implanting a penile prosthesis will damage or destroy any remaining ability to have a natural erection, as well as make other treatment options (oral medications, vacuum devices or injections) impossible. Men with diabetes, spinal cord injuries or skin infections may have an increased risk of infection. Implantation may result in penile curvature or scarring. Some AMS 700 devices contain an antibiotic (InhibiZone™ Antibiotic Surface Treatment). The device is not suitable for patients who are allergic to the antibiotics contained within the device (rifampin, minocycline or other tetracyclines) or those who have systemic lupus, these patients should use one of the devices that do not contain InhibiZone antibiotic surface treatment.

Potential risks may include: device malfunction/failure leading to additional surgery, device migration potentially leading to exposure through the tissue, wearing away/loss of tissue (device/tissue erosion) infection, unintended-inflation of the device and pain/soreness. MH-545411-AB

AMS Ambicor™ Penile Implant

Caution: U.S. Federal law restricts this device to sale by or on the order of a physician.

Your doctor is your best source for information on the risks and benefits of the AMS Ambicor™ Inflatable Penile Prosthesis. Talk to your doctor for a complete listing of risks, warnings and important safety information. Tactra™ Malleable Penile Implant

Caution: U.S. Federal law restricts this device to sale by or on the order of a physician.

Your doctor is your best source for information on the risks and benefits of the Tactra™ Malleable Penile Prosthesis. Talk to your doctor for a complete listing of risks, warnings, and important safety information. The Tactra™ Malleable Penile Prosthesis is intended for use in the treatment of erectile dysfunction (impotence) in adult males. Implanting a penile prosthesis will damage or destroy any remaining natural ability to have a spontaneous erection, as well as make other treatment options impossible. Men with diabetes, spinal cord injuries, or skin infections may have an increased risk of infection. Implantation may result in penile shortening, curvature or scarring.

Additional information is provided in Patient Literature, available through your doctor. MH-611821-AA

There is hope for men with ED to regain the control and confidence to enjoy an active, satisfying sex life.
